

Evacuaid PRO

New and unique emergency bracelet for faster and safer evacuation

Challenging escape-routes [in industry, tunnels, underground facilities, earthquake-prone areas]

Evacuaid is typically worn on belt or wall mounted at strategic places together with other escape and emergency equipment, like escape hoods.

Employees with responsibilities during evacuation [at public areas, hotels, hospitals, offices]

When the alarm is triggered, not everybody can simply leave the building. For employees responsible for others safety, Evacuaid is a great tool for faster and safer evacuation. Evacuaid is typically wall mounted at strategic places, by fire alarm panels, extinguishers and evacuation equipment or worn on belt.

Simply strap on to activate

Find the way out and execute tasks with both hands free

Automatic alarm - be found when time is critical

Mark others

Crowd control

Prepared for the unexpected

Simplicity in every detail

Easy to use – simply strap on to activate

If the user is immobilized, the alarm automatically triggers. When the bracelet is taken off, the bracelet automatically deactivates, ensuring no false alarms.

One size fits all—a secure fit ensuring activation for all wrist sizes

As Evacuaid in most cases is not a personal device, it is vital that the strap fits all wrist sizes. Our robust silicone strap ensures that the strap is tight enough to activate the bracelet on small individuals yet elastic enough to fit industry workers in protective outfits. The strap might feel tight, but a secure fit is necessary to ensure activation in all situations.

No maintenance, no installation, no software upgrades.

Evacuaid's powerful lithium batteries and standalone technology ensures a convenient service concept. Evacuaid can be stored for 6 years without any maintenance, and still be operational for more than 20 hours in emergency mode. Unlike complex personal tracking and location systems, using GPS, GSM, Wi-Fi, VHF signals, Evacuaid is standalone, requiring no installed infrastructure, software upgrades or extensive training.

Storing Evacuaid

Wall mounted by fire alarm panels and extinguishers, at rally points, in tunnels and along challenging escape routes. Evacuaid can also be stored together with escape equipment, like escape-hoods and - chairs, in fire marshall kit or worn on belt.

Red LED alarm lights for optimal smoke penetration

Powerful 90db alarm at 3 m distance

Highly sensitive motion sensor for automatic alarm

Long lasting AA lithium batteries

No installation or maintenance cost

Robust design / IP67 watertight

The frequencies 900, 6000 and 3000 Hz make the alarm distinctive, far reaching and easy to locate

Compact and lightweight, 83 x 69 x 32 mm [H x W x D]

Tests: EMC, EN 61000-6-2, EN 61000-6-3
FCC CFR 47 Part 15 : 2008

Manual alarm button

Powerful LED torches to show the way out and locate others

Evacuaid is attached to the wrist, leaving both hands free to operate

Automatic activation mechanism for stress-situations – simply strap it on to activate

No false alarm – Evacuaid is only activated when attached to the wrist
